Full run: conservatively exclude the reversal and later data; exact failure onset is uncertain

Plate sensor (v7 estimate)
Tunnel reference
Exclude: possible mount movement/fall
Provisional pre-fall fit only
Persistent ~3.88 m/s offset
while reference is zero
Speed (m/s)
Seconds since recording started

Short pre-fall interval supports a rough gain; no independent validation

Original sensor
Rough guide: 0.55 x original sensor
Reference
Speed (m/s)
Seconds since recording started

Time-ordered comparison: changing mount state invalidates a whole-run fit

Rough corrected pre-fall points
Perfect agreement
Failed final zero
Sensor estimate (m/s)
Reference speed (m/s)
Elapsed time (s)
